BruxZir® Solid Zirconia

BruxZir total zirconia crowns are a new option for posterior restorations. BruxZir is a full contoured zirconia crown or bridge with no porcelain overlay, which is fabricated and designed with CAD/CAM technology for a

precise fit. It is an esthetic alternative to PFM metal occlusal/lingual or full-cast restorations. Bruxzir is virtually chip proof, making it ideal for bruxers, implant restorations and areas with limited occlusal space.

Benefits

- Ideal for bruxers and grinders who have destroyed other restorations
- An esthetic alternative to PFM and full-cast crowns
- Chip resistant because of its zirconia base and no porcelain overlay
- Ideal for patients who lack the preparation space for a PFM
